

GraphQL Course

Lab 2

1- Update the application we created in Lab1 to be connected to MongoDB via Mongoose

2- Define the following schemas using mongoose

Product(_id, name, price, categoryId, createdBy)

User (_id, name, email, password)

Note that: Product.createdBy => represents the id of the user who created the product

3- Using GraphQL => Implement the following Endpoints

Url: /graphql

Queries

(1) Get all products (only created by the user authenticated)

include filters like (name, minPrice, maxPrice, categoryId)

(2) Get product by ID(check if it' s created by the user authenticated)

(3) Get User Details By Id

Mutations

(1) Add a new product

(2) Update product by ID

(3) Register User

(4) Login User

4- Protect Product Queries and Mutations such that the user must be authenticated to access them, otherwise return status code 401.

5- Implement the solution using Programmatic approach (graphql-http) npm package

6- Implement Global Error Handling
